Digital from Production to Food Logistics

### Filling and Covering – digital and process-safe

Rieber not only digitalises food logistics, but starts right at production with filling and covering. By connecting to ERP systems, all steps are seamlessly integrated and digitally controlled. Each GN container receives all relevant information via QR code, linking the food and the process – ensuring maximum transparency, efficiency and traceability all the way to the plate.

GN**fill**station

Precise Filling with System

The GN FillStation makes food production efficient and error-free. It imports the filling plan from the ERP system, enabling precise gram-accurate portioning thanks to the integrated scale. GN containers & lids and food information are linked via QR code – for complete traceability and maximum process reliability.

- Direct connection to ERP systems
- Automatic import of filling plans
- Integrated scale for precise portioning
- QR code linking for traceability
- Complete data basis for picking & logistics

GN**cover**station

Automatic & Safe Covering

The GN CoverStation automatically seals containers – no manual pressing required. Whether waterproof plug lid or vaculid® lid, both are sealed cleanly, securely and with optional partial or full vacuum. A protective gas atmosphere can also be generated for longer shelf life and maximum food safety. The machine can be flexibly integrated into your production process, even on a conveyor line.

Advantages:

close	modified atmosphere	vacuum
0 % vacuum	40 % vacuum	100 % vacuum

- Fully automatic sealing of GN containers
- 100 % leak-proof transport
- Compatible with waterproof plug lid and vaculid®
- No manual pressing required
- Optional: protective gas atmosphere for longer shelf life
- Maximum process safety and hygiene

Safe. Fast. Digital

With the GN Fill Station and GN Cover Station, digital food safety starts right at filling – networked, traceable and process-safe in every GN container.
